with angular 5 using components, services, pipes, directives.

Bar Ilan

Economics and logistics- BA

2006-2009

Ort Rehovot

Architecture engineer

1999-2001

Military Service

Logistics Officer 2001-2005

Projects

Coupon System Project (*John Bryce*) - *Code is available on GitHub*

Create a website which holds a variety of coupons. This involves building server-side infrastructure including communication with DB, together with creating the user interface.

Read json data (angular 5) - *Code is available on GitHub*

Json project developed in Angular 5 with a bootstrap 4. The goal of this project is to receive data from JSON files. The first component receives all the tasks information directly from a JSON file. The project was uploaded to the Heroku site and available on mobile.

The Books Library - *Code is available on GitHub*

Single page application based on angular 5 Framework, with typescript and bootstrap 4. Performing a CRUD operation (create, put, delete, update) on a json file with json-server (running on the background), with Http Service, dependency injection.

Knowledge

AngularJS, Angular 2/4/5, JavaScript, TypeScript, Html5, Css3, JQuery,
Bootstrap, Grid, S.P.A
